

An operator who makes his headquarters at an uptown hotel was reported yesterday to have put out a short line of 20,000 to 30,000 shares of stock in London before the opening of the market. Heavy selling here for foreign account, estimated at 50,000 to 60,000 shares, was not unexpected, in view of the conditions reported on Monday as existing in the American market. The London market, where the bull account, some authorities asserted, was the largest that had been open at the beginning of any fortnightly settlement in several years. The bear element on this side made as much capital as possible of rumors that the London settlement would not pass without trouble. There were also rumors of foreign complications of a political nature. The heaviest selling that originated in this market was on those higher priced railroad stocks on which the strength of the recent bull speculation had converged, notably the Harriman Pacific, Pennsylvania, St. Paul, New York Central, and Reading. In all of these and elsewhere in the active list there was evidence throughout the day of tired liquidation by followers of the bull side who, having seen their stocks through the break last week, became discouraged yesterday and let go of them.

A reasonable suspicion attaches to foreign news and rumors emanating from Chicago.

The National City Bank was reported from the floor yesterday to be lending call money freely at 3 1/2 per cent.

The Gates people were supposed to be on top of the stock market yesterday. Their operations on the bear side were undisputed, which was enough to create in some minds the suspicion that buying operations on a more extended scale, either to cover short contracts previously made or for the long account, were being quietly conducted. It is generally of very little use for any outside party to follow what this crowd is really doing for its own account in the market. It probably does not buy at the top and sell at the bottom as often as its open operations might lead people to suppose. On the contrary, it will sometimes be buying heavily while professing bearish sentiment, or selling quietly when its bullish enthusiasm seems immoderate. A good deal of bear fat appeared to be emanating yesterday from this West side of the Hudson. A more modern sentiment is very bullish as to the ultimate tendency of prices, but several of the more active Western speculative groups evidently believe that it will be easier to get down to a level on which operations for the advance may be resumed to greater advantage than it will be to buy stocks from this level, and are inclined, therefore, to help the market down. This is said to have been the attitude of the Gates people toward the market for some weeks past. There is not a good bear among these Western speculators. They are naturally bulls. They make their turns on the bear side of the market, but for a long pull they are always bullish.

A prominent wire house, having also foreign connections, did not show any wires in the first twenty minutes of yesterday's stock market session.

The general outside interest in the market has fallen off very heavily in the past fortnight, with prices reacting, and before the reaction started it had already become greatly restricted, owing to the disinclination of people to follow the advances any further, especially as conservative brokers are giving them no encouragement to do so. Commission business at the present time, therefore, is at a very low ebb. It is not on reactions that the public will buy stocks. It is after prices have had a good reaction and start up again in some earnest, under market leadership which brokers believe in, that general business picks up. No matter how general and insistent the demand for the reaction may have been, the public will wait until satisfied that the movement has culminated before coming into the market again. "I care not how high you put the market," said an experienced operator once last year, after a pronounced demand for a reaction had been ignored for many weeks and business was suffering in consequence of the unwillingness of the conservative public element to follow the market, "but you must have frequent reactions in order to keep the following you need. Otherwise you are merely marking prices up without leaving a market behind you. No matter how high you have carried the market, it will always look cheap to your following after a reaction of 4 or 5 per cent. A stock sells at par and looks high, but after the same stock has sold as high as 100 or 105 it will look cheap on a reaction to par, and people will buy it there the second time you could not have been induced to buy it when it first sold at par."

Lipper & Co., having Philadelphia connections, were perhaps the heaviest sellers of Pennsylvania yesterday.

"Patience is more essential than money to successful stock market speculation," said a disinterested broker yesterday. "The trouble with most of us is that we want to be doing something every minute. If we are buying the market we want it to go up 1 per cent a day. That would be 365 per cent a year. There have to be two sides to a market always."

Union Pacific failed yesterday to repeat the low price at which it sold on last week's break. That low point was 127. The lowest quotation yesterday was 127 1/2. The trading at intervals was very heavy. The buying of Union Pacific continues to be a source of much investment interest, and at the rate of from 150,000 to 200,000 shares a day, and the stock evidently is not being distributed. The process seems, indeed, to be all the other way. Speculative stock houses higher than before are doing the buying from around 410 to 417, is steadily coming on the market and is being absorbed.

Many consider Union Pacific the pivotal stock of the whole market, and believe that as it goes so also will the railroad list. Traders get better speculative action in Union Pacific than in any other high priced railroad stock, and favor it accordingly. The commission house activity in it, however, is much reduced, as it is, of course, in the general market.

Average sentiment on the market was decidedly more bearish yesterday than it was at the beginning of the week, owing partly to the trend of opinion and partly to the greater circulation of opinions and intimations of a pessimistic or ultra-conservative tendency. A preponderance of sentiment either way is a factor in speculation that is not easily reckoned with. A great many experienced traders make the mistake of prematurely opposing a one sided sentiment. After general speculative sentiment has been one sided for so long that the market becomes overbought or oversold, as the case may be, it is not to be trusted and may be successfully opposed by those who have the courage to do so, but for a certain length of time averages of sentiment will prevail in the market. The effect at the present time of a one sided sentiment among speculative followers of the market, three out of five of whom seem to be bearish, is the absence of an enormous speculative buying power. There has been substitution for the bullish enthusiasm which prevailed only a few weeks ago in highly speculative quarters a pronounced inclination to sell stocks short on all rallies. The weight of speculative activity, in other words, has been shifted from one side of the market to the other.

There are many who assert that a sustained bear swing is not likely to occur in the market so long as the steel and iron securities continue to hold their ground. It is noticed that when the general market rallies spasmodically the United States Steel stock recovers perhaps more easily than anything else. They led the recovery that started at 2 o'clock yesterday. On the other hand, however, they are not forced by sheer strength of manipulation against the current of general activity and are permitted to sell off with the market.

The manner in which the market flattened out again in the last half hour yesterday, following a rally which began about 2 o'clock,

was discouraging to the bull following. The market does not seem to show any great rallying power after its sharp dips.
